IRISITY

The Øresund Bridge Consortium

Every day, nearly 70 000 travellers pass over Øresund Bridge. Therefore, safety is a top-priority for The Øresund Bridge Consortium and the surveillance needs to live up to the high security requirements.

The Øresund Bridge is a 16 kilometres long highway and railroad between Sweden and Denmark, creating a conurbation with 3.6 million inhabitants.

Jopas Wulff, director of Traffic Management at Øresund Bridge Consortium: "It all started as a negotiation process about patrolling guards, but I was informed that Irisity could give the Øresund Bridge much better service, an improved technical solution and massively reduced costs. Of course I wanted to know more."

"It feels good to make the protection stronger with intelligent camera surveillance and save 70% of the operating costs – all at the same time."

Jopas Wulff
Director of Traffic Management
The Øresund Bridge Consortium

Challenges

• Great distances
• Multinational area
• High security requirements
• Rough and various weather

Solution

SITE GUARD – Intelligent Camera Surveillance at critical prohibited areas, active 24 hours a day.

Customer value

• Stronger surveillance
• Better use of personnel
• Continuous feedback
• 70% cost savings

Safety

For Jopas, safety is important: "Compared to patrolling guards, Irisity's technology makes it possible to surveil the area 24 hours a day, 7 days a week, instead of sporadically visits once a day. This was a crucial advantage. The solution results in guards being present before the sabotage takes place and before the intrusion has started. We now have a greater understanding of security issues on critical spots."

Professionality

Quality is a central part of everything the Øresund Bridge Consortium does, so they checked the satisfaction with all bidders' reference costumers. It was clear that Irisity received the highest ratings from earlier clients.

Economy

Jopas shares his view on the economic aspects: "In addition to a stronger protection, we saw the economic benefits of using up-to-date technology instead of only old-fashioned patrolling guards. With the two combined, we calculated that our cost for surveillance was cut with over 70%."

"The system has been really relieble since the installation and configuration."

- Jopas Wulff, The Øresund Bridge Consortium

About Irisity

Irisity provides Intelligent Camera Technology Software that partner offers end users as a service.

The system has a scalable and cloud-based infrastructure, enabling international distribution of alarms, market-leading response times, centralized administration as well as collection and distribution of event reports and statistics.

The solution secures large outdoor areas using intelligent video surveillance. Customers get peace of mind round-the-clock, as well as a solution that goes from detection in real time to measure-taking and reporting.

Our business idea is to improve the security with cost-efficient intelligent video surveillance. We accomplish this by delivering an end-to-end solution that greatly reduces intrusions and vandalism.
